" I should prefer the delights of a garden to the dominion of a world. " John Adams

WINTER BIRD TREAT

Mix melted suet and other fats, chopped peanuts and wild bird mixed seeds, 2 parts seed to one part dry ingredients. Pour mixture into small meat pie tins until cool. Pour on hot water to loosen.

TNT. Add an ounce of course sand or fine poultry grit to each pound of seed mixture, when snow covers the ground.

TNT. Add glycerine to water to prevent freezing too soon.

PRUNING SHRUBS—Flowers come on old wood, so the rule is to prune when in bloom or just afterward. Thus no potential bloom is lost. Natural shrub shape is to have many main stems in a clump all ascending from the ground, so prune out old branches.

" THEY TOLD ME SO "

For a flash of flirting wings and bursts of songs I'll plant for the birds! How well I remember the emptiness of a new lawn, the silent winds from a few weed trees, the rare call of the spring robin accompanied by the lowly chirps of the English sparrow, and the birth of a plan to bring to my yard some of the songs from my country childhood.

A plan grew from paper and nursery catalogs to border plantings and a pool for the birds. Now over twenty georgeous species of birds have pleased and fed in the plantings. A pair of Brown Thrashers raised two broods last summer near the gay play of neighbor children. These beautiful brown birds gave me their lovely song in return for the many varieties of berries which beckoned them to my borders. They scrutinized the plants repeatedly for lost larvae to feed their babies which literally grew from the plan.

The white birches last winter held over two dozen Cardinals at one moment, a breath-taking sight in red and white. The same trees dangled seeds to feed even more Redpolls, hungry from the cold North.

The pines sheltered andinjured Evening Grosbeak each night until she was well enough to join her flock that visited daily for a few months to enjoy the feeder, sumac, multiflora rose, juniper, and barberry berries alternately with the flock of Cedar Waxwings.

Those planned plantings for the birds have produced studies in bird antics, poems, rich soil beneath the shrubs, subjects for color photography, and a haven for mental therapy. The birds repay in gifts of beauty, song and natural elimination of insects. No sprays are used or needed to promote the lush growth and blossoms ordinarily spoiled by the insects. The birds solve that problem by searching for them diligently.

How I'd like to see the roadsides again with the birds among the plants I remember so well; the larch, wild rose, wild plum, crabapple - deliciously seedy, green brier, tart wild grape, hawthorn and others which could give such joy to travelers as they give to me from my borders. Real soil conservation filled the fence rows with hazel shrub, bird havens and wildlife homes. I think wherever I may be I shall plant and plant for the birds. Why do I think this way? Because after planning and planting, many little birds came and told me the plan works. --

Maybelle Isham 1610 W. Highland Blvd; Battle Creek, Michigan Jan. 5, 1961
